Arken SE Arkitekter AB works within a broad spectrum of architecture and urban planning. Our company has made a point of keeping this broad spectrum in a world where specialization tends to miss a lot of the holistic approach that is necessary in dealing with sustainable planning.

The tasks we are faced with involve both creating an attractive external framework of blocks, buildings, streets and gardens, as well as a framework that can be more easily influenced by the individual.

Other architectural objectives include individualization, a greater feeling for the dwelling as your mark on Mother Earth, block and street patterns that encourage local businesses and entrepreneurial spirit, smaller preserves that support safety, responsibility and comfort.

ARKEN SE Arkitekter AB was founded in 1981 by the architects and engineers who were at the time employed by the renowned architect Ralph Erskine. They comprised a group of 12 people, who with 5-20 years' cooperation behind them, had worked together on a number of prestigious projects in both Sweden and England. The company was revitalized in 1991, one measure being a more concentrated ownership structure. The nucleus of the company is at present based on professional partners with many years' experience and sound complementary skills. We work in close collaboration with a network of complementary skills in ecology, traffic planning, etc.
